With [Zaid Haymoor](#), Electronic Engineering PhD student, we're proud to display our Energy Harvesting Air Quality Monitor, "Air-sense-IQ", on the Wall-of-Fame at the [The Things Network](#) Amsterdam.

Air-sense-IQ demonstrates our energy harvesting platform, powered by organic solar cells from [Epishine](#). The product has been developed as part of the [EPSRC](#) ATiP project at [Swansea University](#). We are in the process of spinning out the company from SU - so watch this space for more updates!
